

This financial model is broken down into three parts:

- 1. **One-Time Startup Costs:** The total investment you need to make to get the business running.
- 2. **Detailed Monthly Finances:** A look at your monthly income and expenses across three different performance scenarios.
- 3. **Annual Profitability & ROI:** A projection of your yearly earnings and how quickly you can earn back your initial investment.

Part 1: Detailed One-Time Startup Expenses

This is a comprehensive list of everything you'll need to buy or pay for once, before you open.

Category	Item	Estimated Cost (INR)	Notes
A. Renovation & Interior	(Total: ₹1,50,000 - ₹3,00,000)		
	Flooring & Painting	₹40,000 - ₹70,000	For a modern, durable finish.
	Electrical Work & Lighting	₹30,000 - ₹60,000	Good lighting is key for ambiance. Includes wiring for kitchen.
	Plumbing & Water Supply	₹20,000 - ₹40,000	For kitchen sinks and cleaning areas.
	Service Counter & Signage	₹30,000 - ₹60,000	The main point of interaction for customers.
	Furniture (Tables, Chairs, Sofas)	₹30,000 - ₹70,000	Mix of comfortable and functional seating.
B. Kitchen Equipment	(Total: ₹2,00,000 - ₹3,50,000)		

	Cooking Appliances	₹80,000 - ₹1,20,000	4-burner range, deep fryer, tandoor, griddle.
	Refrigeration	₹70,000 - ₹1,00,000	2-door vertical fridge, deep freezer, under-counter chiller.
	Exhaust & Ventilation	₹20,000 - ₹40,000	A mandatory and crucial system for a kitchen.
	Prep & Utility	₹30,000 - ₹90,000	Stainless steel work tables, multiple sinks, utensils, storage racks.
C. Licenses & Setup	(Total: ₹1,30,000 - ₹1,55,000)		
	Licenses & Permits	₹25,000 - ₹50,000	FSSAI, GST, Shop & Establishment, Fire NOC.
	POS System & Technology	₹30,000	Billing software, thermal printer, cash drawer.
	Initial Inventory (First Stock)	₹75,000	Your first big purchase of all raw materials.
D. Contingency Fund	(Total: ₹1,00,000)		
	Working Capital / Emergency Fund	₹1,00,000	Safety cash for any unforeseen expenses. Highly

			recommended.
GRAND TOTAL STARTUP COST		₹5,80,000 - ₹8,05,000	This is your estimated total initial investment.

Part 2: Detailed Monthly Financial Scenarios

This table shows your potential monthly performance, from a slow start to becoming a campus hit. We assume 26 working days in a month.

Financial Metric	Scenario 1: Conservative Start (120 customers/day)	Scenario 2: Target Goal (180 customers/day)	Scenario 3: Optimistic Hit (250 customers/day)
REVENUE			
Average Spend per Customer	₹80	₹80	₹80
Total Monthly Revenue	₹2,49,600	₹3,74,400	₹5,20,000
MONTHLY EXPENSES			
Variable Costs			
Raw Material (Food) Cost	₹99,840 (40%)	₹1,42,272 (38%)	₹1,82,000 (35%)
Fixed Costs			
Staff Salaries	₹60,000	₹60,000	₹65,000 (Slight increase for

			overtime/bonus)
Annual Tender Fee (monthly)	₹10,000	₹10,000	₹10,000
Utilities (Elec, Water, Gas, WiFi)	₹20,000	₹22,000	₹25,000
Marketing & Promotions	₹5,000	₹7,000	₹10,000
Maintenance & Miscellaneous	₹5,000	₹5,000	₹8,000
Total Monthly Expenses	₹1,99,840	₹2,46,272	₹3,00,000
PROFITABILITY			
Gross Profit (Revenue - Food Cost)	₹1,49,760	₹2,32,128	₹3,38,000
<i>Gross Profit Margin</i>	60%	62%	65%
Net Profit Before Tax	₹49,760	₹1,28,128	₹2,20,000
Net Profit Margin	19.9%	34.2%	42.3%

Part 3: Annual Profitability & Return on Investment (ROI)

This shows the big picture of your earnings over a full year.

Annual Metric	Scenario 1: Conservative	Scenario 2: Target Goal	Scenario 3: Optimistic Hit
----------------------	-------------------------------------	------------------------------------	---------------------------------------

	Start		
Total Annual Revenue	₹29,95,200	₹44,92,800	₹62,40,000
Total Annual Net Profit (Before Tax)	₹5,97,120	₹15,37,536	₹26,40,000

Return on Investment (ROI) Calculation

The ROI tells you how long it will take to earn back your initial investment. Let's base it on the **Target Goal (Scenario 2)** and an average startup cost of **₹7,00,000**.

- **Annual Net Profit:** ₹15,37,536
- **Initial Investment:** ₹7,00,000

Time to Recoup Investment = Initial Investment / Annual Profit

Time = ₹7,00,000 / ₹15,37,536 ≈ **0.45 years**

0.45 years is approximately **5.5 months**.

Conclusion:

This detailed breakdown shows that your business has a very strong financial foundation. Even in a conservative scenario, you are profitable. In the target scenario, you could earn back your entire initial investment in **less than 6 months**, which is an outstanding return for any new business. The key to achieving this will be controlling your food costs by leveraging the wholesale market and driving daily customer footfall through good food and marketing.
